

Attention Factoring Consultants

Get the premier
Factoring Marketing Tool
Profitability Analysis Software
Specifically designed for
Financial Professionals.

This extraordinary consulting tool is called the

Invoice Profitability Calculator
(IPC).

Use the **IPC** to create your **Factoring Income**.
If you seek to earn **\$50,000** to **\$100,000** a year
in income, invest in **IPC** tools that would
guarantee that result.

Empowering Businesses With Profitability Through Knowledge

IPC Marketing Techniques

With the advent of the **IPC** you can let the **IPC** answer most of the questions that any **Client Prospect** might have about **Factoring**. All **Prospects** want to know how **Factoring impacts** the bottom line and the **IPC** gives them the answers they seek. With the **IPC** the benefits of **Factoring** sells itself, thereby, making it much easier to obtain **Factoring Applications** (built into the **IPC**). Instead of taking **6 months** to become comfortable in making presentations and being able to answer all of the questions the prospects tend to ask, just let the **IPC** answer most of them for you. For that reason you can become an accomplished **Factoring Financial Professional** much quicker.

How difficult do you believe it will be in getting a prospect interested in hearing what you have to say using the following?

"I have discovered a way for a business to sell Invoices for more than Face Value – about 1% to 5% more. If you are interested in hearing about this, I would like to share with you how it is done. I will show you Profitability Analysis software that you can use to verify that your business would be more profitable. Could I meet with you on Monday at...?"

You should **"Get the Appointment"** in about 20 seconds. We have other scripts in our **Learning Center** to assist **Consultants** in obtaining the appointment that work just as well.

"It 's not how much Revenue a business receives every year. It's about how much of that Revenue the business gets to keep. The business has three choices. 1) Continue the current financial strategy and have no increase in Profitability. 2) Use Debt Services and lose Profitability by the amount of the associated interest amount. 3) Sell Invoices and increase Profitability by about 1% to 5% of the Invoice Face Value."

The marketing technique that works best for **Financial Professionals** makes use of both online and offline **IPC** software to assist in making presentations to prospects. All the Financial Professionals have to do is use the online **IPC** software to assist the **Prospect** to determine, if the **Prospect's** business could *increase Profits*, by *selling Invoices*. The **IPC Online** quickly shows the **Prospect** how **Factoring** would *impact* on the bottom line, e.g. selling a million dollars of **Invoices** in a year could yield **\$10,000 to \$50,000** in additional after tax **Profits**. The **IPC Online** only yields **Profitability Analysis** results. In order for the **Prospect** to examine the details of the **Profitability** mechanism, the **Prospect** would have to use the **IPC** that runs in **Microsoft® Excel**. The **Prospect** would have to get the **IPC** (executives do not have a problem purchasing **Financial Analysis** tools for their business) or have the **Financial Professional** provide the **IPC** for them. Either way the **Prospect** could then input their sensitive financial data on their own computer to view the detailed **Profitability Analysis** results.

This marketing process works very effectively. All the Financial Professional has to do is to learn the details of this approach and master the communications with Prospects. Normally, it takes only 30 to 90 days of advanced study to become a master of this technique as long as you have the IPC and the Advanced Consultant Training (ACT) Factoring Marketing tools. Without these tools it is next to impossible to learn what is necessary to become successful in this business.

Recognize the fact that you will be delivering valuable knowledge and services to **Prospects** in a very short period of time and they will appreciate your effort. So don't be afraid to show the **IPC** to any **Prospect**, you will earn their respect. As it turns out **Microsoft® Excel** is the **Premier Financial Analysis and Reporting Tool** used by almost every business in the country, and the **IPC** runs in **Microsoft® Excel**. Your prospect CEO, CFO, Accountant, etc. already knows how to use **Microsoft® Excel** (they will have no trouble using the **IPC**).

Financial Professionals need to learn enough about the **Financials** used by businesses everywhere, i.e. the **Income Statement**, the **Balance Sheet**, the **Aging Report**, etc. for starters, so that, they can communicate with the top executives of a business in an intelligent manner. All of our products assist Financial Professionals in learning how to inform ordinary business executives and accountants on *how and why Invoices can be sold for more than Face Value*.

If you, as a **Financial Professional**, are concerned about the cost of our products that will help you to become successful in this business, then you should also be concerned about your skill level in closing **Financial Services** a year from now. Please understand that without these fast track tools; it might take years to achieve the skills necessary to become successful.

Advanced Financial Services Training For Consultants

Get the extraordinary
Financial Marketing Tool

Specifically designed for

Financial Services Consultants

This astonishing Consulting Tool is called the

Advanced Client Training (ACT)
For Consultants.

Use the **ACT** to *guarantee* your success as a
Financial Services Consultant.

Empowering Businesses With Profitability Through Knowledge

Sell **Invoices** for **1% to 5%** more than the **Invoice Face Value**.

This is a slogan **Consultants** should master.
(*The slogan will force open doors that were extremely difficult to open in the past.*)

How in the world is that possible?

If you can explain that to a prospect, then you have a great possibility selling your financial services.

Financial Service Professionals can learn exactly how most businesses extract **1% - 5% Extra Cash** with no additional investment whatsoever. *Can you imagine how much money that represents in a business?* The **ACT** product was designed to assist **Financial Service Professionals** in learning the best marketing techniques that create **Financial** (debt or factoring) **Service Applications**.

It is very difficult to make a living in this business unless you get applications for financing from your prospects. The **ACT** product goes a long way in preparing an individual to make the *best use of their resources*, i.e. time and money. The **ACT** product costs *very little* and allows the individual to *increase productivity* immediately. The **ACT** product *increases your knowledge* about what motivates the business executive to use your financial services. Most high-level executives are charged with **Fiduciary** responsibility and are always concerned with **Cash Assets** and **Liabilities** of the business. They tend to agree to do anything that will increase the **Net Worth** (*increase Cash Assets* or *decrease Liabilities*) of the business, and are great **Targets of Opportunity** for **Financial Service Professionals**.

Many individuals who received their **Basic Training** in **Financial Services** were under the assumption that it was easy to be successful in this **Financial Services** business. That may be the case for a few individuals, but for most of us, we have to work harder. The **ACT** product provides **Advanced Training** for **Consultants** that will teach you how the **Cash Assets** are *impacted* by your financial services, show you how to *overcome Objections* for your financial services, show you how to deliver *positive Presentations* to prospects, teach you about the *value* of **Marketing Scripts**, etc. In short, the **Consultant** will learn how to jump over all of the hurdles and gain the respect from each prospect, which will enhance your productivity in obtaining **Financial Service Applications**. *Isn't that the goal that every Consultant wants to achieve?*

The **ACT** product is a movie that consists of 11 different videos that explain the concepts, methods, and ideas for selling financial services. These **Marketing Techniques** were not revealed to you when you attended your **Basic Training** for financial services class. It was not possible to cover all of the details and special knowledge in the time allotted. The **ACT** product provides the needed **Advanced Training**.

The **Script** for the audio portion of the entire **ACT** movie is also available and can be used to generate your own customized **Marketing Scripts** for your particular financial services arena. Each of your **Scripts** would target presentations to your prospects for various purposes. These **Scripts** are the best way to strengthen the confidence, knowledge, and presentation skills that allow **Consultants** to become productive quickly.

ADVANCED FACTORING MARKETING TRAINING

For Financial Services Consultants

Consultant Edition

#1 Introduction to Advanced Training: Cash is the lifeblood of any business, and is one of the principal Assets in the Balance Sheet. We show how by incorporating Factoring the Cash Assets *can be increased* without adding any extra Liabilities in the Balance Sheet. Factoring is the only Cash Flow instrument that can increase the worthiness of the Balance Sheet in any business.

#2 Remembering Past Factoring Training: Remember your first introduction to Factoring in your initial training program. You must realize by now, that new concepts, methods, and ideas were being presented to you at a very fast clip, and now you are having difficulty in recalling important knowledge about Factoring. The primary mission of this video is to explain to you, why Factoring is the only financial vehicle that will increase the Net Worth of any business with Accounts Receivable. An overview of the training is presented and analyzed.

#3 Introduction to Financial Statements: Business Financials are introduced and analyzed. The key ones are the Income Statement, the Balance Sheet, and the Cash Flow Statement. The Income Statement is analyzed and reviewed in detail. The presentation explains in detail how Factoring impacts the Balance Sheet and Cash Flow.

#4 The Factoring Financial Model: The Factoring Financial Model is presented graphically. There are four (4) different time periods in the Factoring Model - the Pre-Invoice investment period, the delay it takes to receive the Advance payment, the balance of the Accounts Receivable period that was revealed in the Aging Report for the Customer, and the delay it takes to receive the final Rebate payment from the Factor. The Factoring Model and Cash Flow are analyzed in detail for Accounts Receivable Revenue and the Working Capital Investment in Cost of Goods Sold for businesses using Factoring and for those businesses *not using* Factoring.

#5 Calculating the Working Capital Investment: In this section we examine how the Investment in Working Capital is calculated. We show you how to measure the *exact amount* of improvement of the Cash Assets in the Balance Sheet, and why it is important to the executives in their business. The Investment Risk in the Working Capital Investment is analyzed and calculated in detail for businesses using Factoring and *not using* Factoring services. This is a long video that explains the How and Why Factoring *reduces* the Risk of doing business and *increases* the Cash Assets of the business.

#6 Calculating the Working Capital Investment continued: The Income Statement compares business Strategies (*using* Factoring and *not using* Factoring services) for a projected business level of Revenue. The Income Statement has additional rows inserted that define the exact impact that Factoring has on the Balance Sheet at the same time the Income Statement is viewed. This presentation is unique, because anyone can view the influence the improved Cash Flow has on the Effective bottom line. The word Effective is used to signify the actual impact the increased Cash Assets have on the business, even though the Income Statement is being viewed. Again this is a rather long video that focuses on the Investment in the Working Capital required for the Variable Costs, so that, the precise amount of Working Capital Investment Savings can be determined.

Empowering Businesses With Profitability Through Knowledge

#7 Marketing Factoring Services: Your **Basic Training** in **Factoring Financial Services** permitted you to learn fundamental knowledge of the internals of the **Factoring Financial** vehicle i.e. **Advance, Discount Fee, Rebate, Internal Rate of Return** on the **Working Capital Investment, Income Statement, Aging Reports**, etc. Lessons on the **Balance Sheet** were minimal at best.. Additionally, certain **Marketing** techniques were revealed for selling **Factoring Services** to prospects. When you became comfortable with the terminology and marketing techniques, you tried to explain the benefits of **Factoring** to your business prospects. It is suspected, however, that approach has not worked out very well, because the prospect immediately objected to **Factoring** and had very little respect for you. This section begins your preparation on how to handle **Objections to Factoring** for any prospect. There is a better way of making approaches to prospects and to make presentations to them. It is an "**Art Form**" that each of us must learn.

#8 Delivering A Positive Presentation: There are positive aspects about **Factoring**. This begins by understanding the basic **Features** and **Benefits** of **Factoring**. Every **Consultant** must be able to explain why increased **Cash Flow** will *reduce* investment in **Working Capital**, *provide* **Tax Relief**, and *increase* the **Cash Assets** of any business *without* any investment whatsoever by doing the same business. An educated **Consultant** can immediately tell the executive how that is possible and gain the immediate respect from the prospect. The presentation includes language that business executives want to hear, because they respect what the **Consultant** has to say and want to learn more.

#9 Overcoming Objections to Factoring: **Overcoming Objections** is a key component in creating any kind of sales of financial services. Topics are discussed that assist **Consultants** in overcoming objections to **Factoring** with their prospects. It all begins by recognizing the three primary financial vehicles that can fund the **Variable Cost Working Capital Requirement** for any business, namely, **Cash, Debt Services**, and/or **Factoring Services**. There are two primary negatives of **Factoring**. Executives view *any loss* of **Revenue** and **Profits** as **Negatives**, because their performance as an officer of the company is largely measured on growing the **Revenue** and **Profits** of the business, and **Factoring** reduces that **Revenue** and **Profits** due to the **Discount Fee**. There is a secondary negative of **Factoring** that is frequently encountered, i.e. when they realize their **Customers** will now be paying their **Invoices** to a financial institution instead of to their own business. The video explains how to handle each objection. The balance of this video reflects on the Positives and Negatives for each of the three primary financial vehicles that can fund the **Variable Cost Working Capital Requirement** for any business.

#10 Marketing Scripts for Business Prospects: The best way to master any dialogue is by organizing your preparation, by repetitive study, by asking questions, and most importantly, by setting several hours each week for learning the concepts, methods, and ideas. Realize that **Professional Athletes** have done many, many "**Repetitions**" or "**Reps**" in their sport in order to learn their business and become proficient. You must do the same, if you want to become a **Professional Consultant**. Learning this business is not easy. It is best to write down everything you will have to say to a prospect, i.e. create a set of **Scripts**. It is expected that every **Financial Professional** viewing this movie will have been introduced on *how to overcome* the **Objections to Factoring**. Whenever those objections come up in a **Presentation to Prospects**, you must react promptly. It is best to use one of your "*prepared*" responses to overcome the objection quickly and sensibly. Now that takes forethought, preparation, and practice - just like successful **Professional Athletes**. Once the **Consultant** desires to make a full time career change, it is very beneficial to create **Scripts** (documents) that you can edit and print. Use these **Scripts** to practice your approach, your **Presentation to get Appointments**, your **Presentation** to the top **Executives** and to the **Back Office** people in a business, your **Presentation** asking for the **Financial Information**, your **Profitability Analysis Presentation**, and most importantly, asking for the **Factoring Application Presentation**.

#11 Where do we go from here? Here is a slogan **Consultants** should master. "**No Games! Just Cash! 1% - 3% Extra Cash** for every **Invoice** every **Year**." *The slogan will force open doors that were extremely difficult to open in the past.* **How in the world is that possible?** This entire movie is devoted in assisting the **Consultant** in learning *how to answer* that question. These answers were not provided in your **Basic Training** at all. The only way to learn the answers is to obtain additional **Advanced Training**. This specialized knowledge is not widespread in the business community. Savvy **Financial Services Professionals** can benefit their full time career objectives by purchasing this **Advanced Training** Program.
